The product information says: If you are also interested in more detailed instructions for scanning or for configuring your printer, you can find the information in the user manual that was included with your printer. (L-547) Is there any way to get this info? Any help would be appreciated. Well, my wife and I are planning on getting a new laptop for Christmas. We'll probably go for one of the new macs (mine being a macbook air). Now I was wondering, does the d-slr software take any different type of memory card than the one the camera uses (jpeg)? We have been told that if you use a Compact Flash Card or Memory Card that is not the camera's type, your pictures won't show up on the computer, but I've also heard that if you use a memory card that is the camera's type it will work just fine. I was also thinking about getting one of those USB to SATA adapters, that way I could take all of our photos and videos on the new laptop and then put them on the hard drive. It sounds like that might be a better idea, since the video card for the new laptop probably won't have that much memory. The video card of the new laptop probably won't have much memory, and the dslr software should work just fine regardless of what kind of memory card you use. If you're worried about the memory card that the camera uses, you can always take your camera to your computer shop and have them store the pictures on your hard drive or maybe even an external drive. Well, I just found out something that could be a problem, I think. I opened my camera and the battery was completely dead. So I don't have any pictures on it, and even though I have the software, I can't use it. So, if you have a camera or a printer, and you don't know how to use it, you could look it up on the internet and download all the instructions, if you need them. Some of the printers on the internet even have their own built in instructions, which can be helpful if you need some more. Hey guys, I'm also in need of help. I'm also trying to print out some pictures from the net. I have a Canon Pixma iP4000 and I've downloaded the software for it. I have connected my computer to my Canon printer, and when I try to run the program 82157476af
